

Orbit 4.2 Release Notes

The Orbit Team — 2026-06-01

Highlights

Orbit 4.2 focuses on reproducible builds and a faster cold start. Upgrade with `orbit self update`.

☒ New

- **Deterministic artifacts** — builds now produce byte-identical outputs given the same inputs, making cache hits and supply-chain verification reliable.
- **orbit doctor** — one command to validate your environment.
- Sub-100 ms cold start on typical projects.

☒ Improvements

- Reduced binary size by 18%.
- Clearer error messages for misconfigured pipelines.
- Documentation is now generated and published as a PDF on every release.

☒ Fixes

- Fixed a race in the asset cache under high parallelism.
- Correctly handle UTF-8 paths on Windows.

⚠ Breaking changes

Change	Migration
- <code>-legacy-cache</code> removed	Remove the flag; the new cache is default
Config key <code>net.fetch</code> renamed	Use <code>network.allow</code> instead

Contributors

Thanks to everyone who contributed to this release. See the full changelog for the complete list of merged pull requests.
