Page furniture and themes

This document is rendered with a **custom TOML theme** ([theme.toml](#)) that inherits from the default base and overrides the accent color, plus a running --header built from the document title.

Custom theme A .toml file passed to --theme, starting from a built-in base and overriding individual fields — colors are validated before rendering.

Page header Set with --header "{title}"; the placeholder resolves from frontmatter.

Callouts

Note

GitHub-style alerts render as colored callout boxes in both the PDF and the HTML output.

Warning

All five kinds are supported: note, tip, important, warning and caution.

The classics, still here

Feature	Since	Notes
Tables	0.1	with column alignment
Footnotes	0.1	numbered ¹
Task lists	0.1	see below
Definition lists	0.3	this document
Alerts	0.3	the callouts above

¹Footnotes render at the bottom of the page, like this one.

- ☒ Convert this file to PDF
- ☒ Convert it to HTML with `--format html`
- ☐ Pipe it from stdin with `md2pdf -`

```
md2pdf feature-tour/source.md --theme theme.toml --toc --header "{title}"
```
